Then, the next spring it bears heavily and after a six weeks' rest, starts in again and bears all summer and fall. Streamliner, The New Everbearing Strawberry

INDIAN SUMMER EVERBEARING RASPBERRY

Each year sees INDIAN SUMMER forging steadily to the front. The New York Fruit Testing Association considers this variety decidedly superior to other everbearing sorts in the trade.

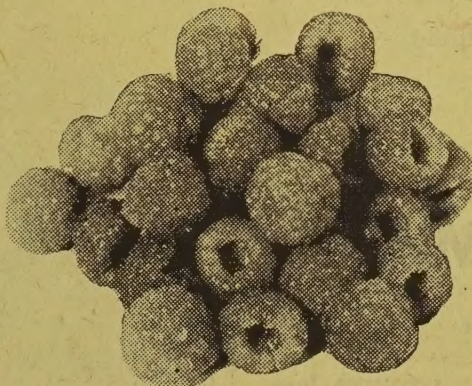

The berries are large, conical, medium red, rather soft, good quality. The summer crop ripens early, beginning the last week of June. The autumn crop starts in September and continues until a severe frost. The bulk of the fall crop ripens in October.

The fall crop may not always ripen in northern sections but if it does not, the regular crop in June is well worth while. Since it ripens ahead of most red raspberries, it brings a fancy price on the market. This past season growers got \$6.00 a case on the Minneapolis market for most of their INDIAN SUMMER on account of its earliness.

For the best everbearing raspberry, plant INDIAN SUMMER. 1 yr. No. 1: Each, 27c; 3 for 69c; 6 for \$1.23; doz., \$1.98; 25 for \$3.50; 50 for \$6.35; 100 for \$11.75, postpaid. Cannot be sent to New Jersey.

SUNRISE RASPBERRY

One of the newer raspberries. Not everbearing. Concerning Sunrise, the U. S. Department of Agriculture says, "Of most importance to the practical grower perhaps, are the hardiness and resistance to disease of the plants, and the earliness and good size of the fruits, of Sunrise." Sunrise bears bright red berries that turn dark red on ripening, the berries pick easily, are firm, fine textured, non-crumbling and mild subacid in flavor. Berries about as large as Latham but earlier and hardier. 1 yr. No. 1: Each, 24c; 3 for 63c; 6 for \$1.14; doz., \$1.89; 25 for \$3.25; 50 for \$5.85; 100 for \$9.95, postpaid. Cannot be sent to New Jersey.

Salzer's Sensational, New, Heavy Yields, Early

Notice Its Seven Faint Lobes

SALZER'S *Sensational* TOMATO

Offered for the first time last year, and obtainable only from Salzer's! Salzer's Sensational is a tomato of surpassing excellence. It has earliness, solidity, perfect smoothness, large size, and it is a tremendous yielder! We believe it will eclipse any early tomato grown today.

Mr. Wm. E. Vail

Salzer's Sensational was developed by Mr. William E. Vail, Yorktown Heights, N. Y., who has given the United States some very fine introductions, about the finest of which is this superb tomato. The cool summer and cloudy days of 1945 retarded tomatoes, but Salzer's Sensational came through well and outyielded all other varieties! Seed was planted at Cliffwood Farms on June 6 and the first tomatoes were picked on August 25,—81 days from seed to ripe fruit! The tomatoes are red, with firm flesh, meaty, smooth, and of sub-acid flavor. The yield is tremendous. One characteristic is the shape, the tomatoes having seven more or less indistinct lobes or ridges, which enhances its appearance. Fine for tomato juice. Seed continues to be short this year.

1121—Pkg., 50c; ¼ oz., 85c; ½ oz., \$1.40, postpaid.

Salzer's **CUSHION 'MUMS** *hardy-free-flowering*

Dean Kay 'MUMS

Salzer's Dean Kay Chrysanthemums bloom very early having commenced to bloom on August 8 and continuing their extravagant display until cut down by hard frost.

We know of no finer advance in recent years, than in these 'Mums! They resemble Salzer's Cushion 'Mums except that they make a distinctly larger bush and that they bloom earlier and if anything, they bloom more freely. They grow about two feet high with a three foot spread, and produce masses of bloom. They are also very hardy and they bloom profusely! Exceedingly fine for in front of shrubbery or for landscaping.

We offer four lovely colors:

Canary Dean Kay—Rich deep yellow semi-double flowers.

Orchid Dean Kay—Lovely clear orchid, large flowers, early, double.

Pink Dean Kay—Clear deep pink semi-double flowers.

Red Dean Kay—Brilliant crimson, double flowers, very striking.

Price: Any of above: Each, 58c; 3 for \$1.55; 4 (or 1 of each) for \$1.95; 6 for \$2.69; dozen, \$5.10, postpaid.

A Sensation of Color and Beauty

You may plant Salzer's Hardy Cushion Chrysanthemums anywhere in the garden with most pleasing effect, on each side of a steps, along the foundation of the house, in the lawn, in solid beds, or as a border along the boundary line, or to line driveways or walks! They grow rapidly, forming large, round, compact bushes completely covered with simply hundreds of full, double, perfect Chrysanthemum blooms from about the middle of August until frost.

LOADS OF FLOWERS

We have counted 500 buds and flowers on one two year old plant! Think of it—up to 500 blooms on one single plant. Each plant, the first year, produces such loads of gorgeous flowers that passersby will look at it in wonder!

EASILY GROWN

Salzer's Hardy Cushion 'Mums are easily grown. The plants grow about 18 inches high and spread out 2 to 2½ feet, forming a lovely and striking, dense and compact mound. Plant them about 2 feet apart. They are literally covered with flowers which last over a long period. Give them a handful of fertilizer twice a year.

We offer **YELLOW CUSHION**, deep yellow; **PINK CUSHION**, light pink; **BRONZE CUSHION**, deep bronze; **RED CUSHION**, deep red flowers; **PYGMY GOLD CUSHION**, yellow shading to bronze; **WHITE CUSHION**, pure white. State kind wanted.

La Crosse, Wisconsin
January 2, 1947

Dear Friends:

It is with considerable pleasure that we send you our 1947 spring catalog. This represents our 79th consecutive issue—79 years of faithful service. We cannot help feeling a bit proud of this record in serving three generations of gardeners and farmers.

Quite often these days we hear considerable talk about "security." We hear it on the radio, read about it in the newspapers. It is something all of us desire and strive for. Your garden offers security along with pleasure and the results cannot be measured in dollars and cents alone. For some it is a livelihood, for others it is beauty and recreation, but for all there is a degree of security that can only be obtained through growing of vegetables and flowers from one's own efforts. It has been truly said that gardening is an occupation for which no man is too high nor too low.

This year again we offer you the finest in seeds, plants and shrubbery. Our trials are carefully conducted at Cliffwood farm and our seeds are selected from the best strains. You can buy with confidence from Salzer's. Although costs have risen perceptibly on every item we use, our prices to you have not increased to any appreciable extent. Our prices are rock bottom and we are confident, represent the highest values obtainable.

Those of you who are interested in house plants, will find a list of choice and novel items that will delight you and provide color and beauty for your home throughout the year.

For those who are building new homes, or those who are planning to replace shrubbery, we offer a fine, complete line of decorative shrubbery and perennial plants that will beautify your grounds and add many dollars of value to your property.

Salzer's Giant Bush Lima Bean

SALZER'S GIANT BUSH LIMA

For Size and Flavor Has No Rival

Enormously productive and bears pods of immense size. Plants are of vigorous growth, with heavy foliage, and of true bush form, the full grown bushes measuring 30 inches in height and 24 inches across the top. Pods are frequently borne in "clusters" of from 5 to 8, are 5 to 6 inches long by 1 1/4 inches wide, and each one is well filled with large, thick, tender, full-size beans of melting and luscious flavor. It is very early, maturing in about 65 days. A universal favorite, because of its earliness, productiveness, size and fine flavor. Lima Beans should not be planted before the soil has warmed up and the weather is quite settled. Good for freezing. Pick when beans reach full size, but while still green and tender.

115—Pkg., 15c; 2 pkgs., 25c; 1/2 lb., 31c; lb., 49c; 2 lbs., 94c; 5 lbs., \$1.99, postpaid. Not prepaid: 10 lbs., \$3.50; 60 lbs., \$18.85.

**SALZER'S
GIANT BUSH LIMA**

SMALL BUSH OR SIEVA

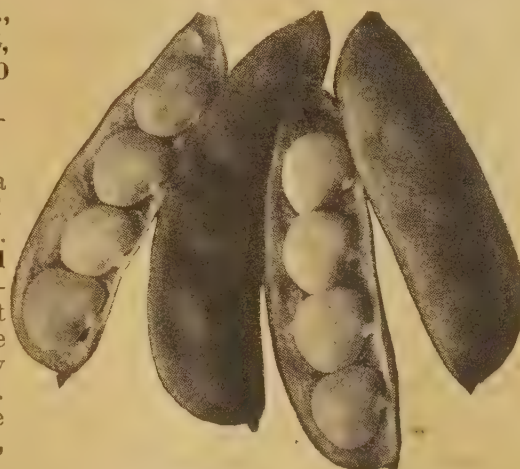

Is the smallest but most prolific of all the white seeded varieties, and as they are hardy and very early, are worth growing in the North. Matures in 70 to 78 days. Of true bush growth, the plants bear a tremendous lot of pods 3 inches long and filled with 3 or 4 light green, small, flat beans, of a sweet and delicious flavor. When mature, the beans are white, and keep well for winter shell beans.

116—Pkg., 9c; 2 pkgs., 15c; 1/2 lb., 25c; lb., 43c; 2 lbs., 78c; 5 lbs., \$1.65, postpaid. Not prepaid: 10 lbs., \$2.80; 60 lbs., \$14.65.

FORDHOOK 242

Large thick beans, three to four to a pod, of extra fine flavor, easy to shell! Pods are uniform and it is a heavy yielder. Early. 73 days. Fordhook 242 sets basal pods in hot, dry weather, a most important point in the South. One trial report shows plants holding up in 102 degree temperatures in the West, hence very valuable where the summers are hot. Very fine both for the market and the home gardener. 112—Pkg., 14c; 2 pkgs.,

EDIBLE SOY BEANS

EDIBLE SOY BEANS are the food of the future! The tremendous food value of soy beans has long been known but the difficulty has been to develop a variety that would cook and bake soft so as to be edible. Edible Soy Beans are invaluable for making your own bean sprouts throughout the year.

The original seed was brought to the U. S. by Mr. Morse of the U. S. Dept. of Agriculture and was bred up and developed by Prof. Geo. M. Briggs of the University of Wisconsin and his associates. Matures in 85 days. Soy Beans are a substitute for meat; when green they are as good as fresh peas; cooked or baked, they taste somewhat like navy beans; roasted, they taste like peanuts. And they are of untold value for diabetics since they are low in starch! Fine for canning and freezing.

BANSEI—An early variety, plants 24 in. tall, pods many, 2 1/2 in. long, with 2 to 3 beans each, that cook and bake perfectly. Matures in 120 days.

4312—Pkg., 7c; 2 pkgs., 12c; 1/2 lb., 22c; lb., 37c; 2 lbs., 68c; 5 lbs., \$1.35, postpaid. Not prepaid: 10 lbs., \$2.20.

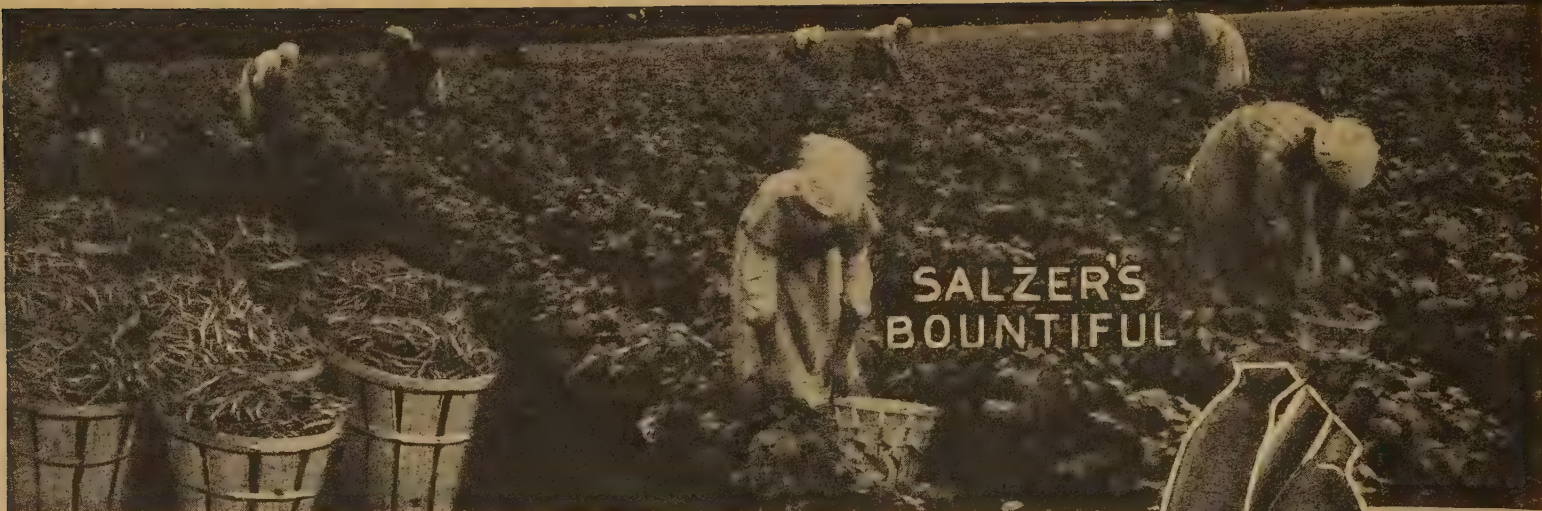

Baked Bansei Soy Beans

MENDOTA—A new edible soy bean, developed by Prof. O. B. Combs of the U. of Wis., 10 days earlier than Bansei, and cans and freezes perfectly! Plants 28 in. high, very prolific, disease resistant, high in vitamins, fine for sprouts. Cooks and bakes deliciously soft. 4313—Pkg., 10c; 2 pkgs., 17c; 1/2 lb., 27c; lb., 46c; 2 lbs., 85c; 5 lbs., \$1.80, postpaid. Not prepaid: 10 lbs., \$3.10.

*Enormously Prolific, Stringless,
Meaty and Tender.*

This comparatively new variety, originated a few years ago by an Eastern grower, is a most valuable acquisition to the garden. Robust in growth, with long pods, entirely stringless, fleshy, and of superb quality. Plants are of erect bush habit, about 18 to 20 inches in height, and are most prolific. They are free from all diseases; even in wet seasons the foliage seems to be proof against blight, and the pods are always free from rust. Pods are fleshy, flattened in form, from 6 to 7 inches in length, $\frac{3}{8}$ inch thick, and $\frac{1}{2}$ inch broad, and of a rich lemon-yellow color. They are remarkable for their brittleness, exceptional flavor, and their absolute freedom from strings. Matures in 45 days.

Mr. Julius Hausser, Ogema, Wis., writes, "We like your Stringless Kidney Wax Beans among the best we ever had. Have sown Salzer's Seeds continuously since 1910."

SALZER'S
Cherry Beet

We first offered Salzer's Cherry Beet in 1933, the memorable Chicago World's Fair year, as the Unknown Beet, and thousands planted it, to find it one of the nicest beets grown! Salzer's Cherry Beet is a small, early beet, maturing in 52 days and is especially fine for canning and pickling whole at 1 1/4 to 1 1/2 inches in diameter. Roots are smooth, even in size and shape and almost perfectly globular. Tops and tap roots are very small. The flesh is an intense deep crimson, free from white zones, elegant in quality.

Yields heavily. While it is a splendid beet for canning, its attractive color and small uniform size make it ideal for daily table use. The flesh is so fine grained, so sweet and tasty, that it almost sets a new standard for beet quality! Fine for both home and market. 160—Pkg., 10c; oz., 23c; 1/4 lb., 65c; 1/2 lb., \$1.19; lb., \$2.25, postpaid.

Crosby's Egyptian

One of the most extensively grown of any variety of beets, by market gardeners. It is noted for its handsome form, small tops, very small tap-root, fine quality and quick, rapid growth. Roots run uniform in size and shape, are rather flattened, turnip shaped, reach a good size, are tender and crisp. Flesh is an attractive dark red color with slightly lighter red zoning. Especially desirable for bunching for the early market. Takes on its turnip shape very early. Matures in 45 days. Also fine for the home gardener. We specialize in beet seed and we don't believe any better strains can be purchased.

158—Pkg., 9c; oz., 20c; 1/4 lb., 59c; 1/2 lb., \$1.10; lb., \$1.95, postpaid.

178—Crosby's Egyptian, Salzer's Cliffwood Farm TRIPLE-A-TESTED—A special re-selected strain certified by THREE-WAY tests: Pkg., 14c; oz., 23c; 1/4 lb., 65c; 1/2 lb., \$1.19; lb., \$2.25, postpaid.

Fireball

A handsome, globe-shaped beet with smooth skin and of an attractive deep blood-red color, of perfect globe form and superior in quality, having very fine grained, rich and exceedingly tender flesh of excellent quality. The roots are uniform, medium size, of perfect globe shape, remarkably smooth surface, very small tap-root, and the color of the skin and flesh is a brilliant, fiery red. This intensity of color is retained when cooked.

167—Pkg., 5c; oz., 21c; 1/4 lb., 62c; 1/2 lb., \$1.12; lb., \$2.10, postpaid.

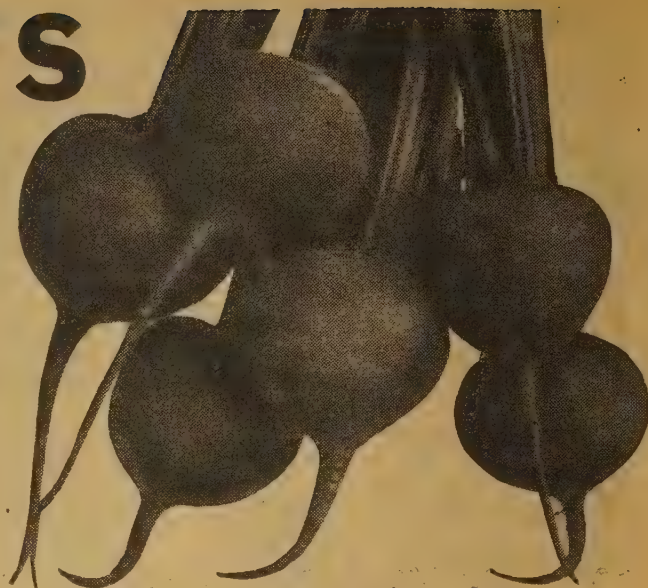

MIXED BEETS

Early Wonder Beets

Early Wonder

Its beautiful deep blood-red color, nearly globe-shaped root with almost no lighter zoning in the cross-section of the root, its small sized top and its smooth, clean, and small tap-root makes it a decided asset in the beet family. Matures evenly so that the entire crop may be gathered at one time. It is a very rapid grower, is very quickly in presentable market shape, and because of its early maturity, it can be sown outside as late as July. Matures in 44 days.

Salzer's **GIANT FLAT DUTCH** Cabbage

The Grandest, Best Keeping, Surest Heading, Large Cabbage in the World

A Sure Header

For sureness in heading and regularity in growth, SALZER'S GIANT FLAT DUTCH heads the list! Heads are 12 to 14 inches in diameter, averaging 18 to 20 pounds in weight. It forms every time, very large, very hard, solid heads, crisp, tender, sweet, uniform in shape, color and handsome appearance. It has a very short stem, is a very compact grower, forms few loose leaves, which turn into the head and if planted closely will yield enormous crops. Reports of 999 marketable heads from 1,000 plants set out are of frequent occurrence. It keeps well until late in Spring and is good for shipping.

Always in Great Demand

On the city markets, the attractive, fine appearing heads sell themselves to thrifty purchasers. The home gardener who once plants this superb variety, finds it so far superior in every respect to any other late sort that he has ever tried, that where Salzer's Giant Flat Dutch has once been tried, it has never been supplanted by other varieties, but is sown year after year. Unsurpassed in quality and taste, sureness of heading, weight, size, attractiveness, far superior for sauerkraut and slaw. Once planted, always planted. Pronounced everywhere to be the greatest late flat cabbage ever introduced, and we believe it is the finest of any late cabbage in existence. 119 days.

Salzer's
Lightning

CABBAGE

SALZER'S LIGHTNING

Salzer's Lightning Cabbage is an extremely early cabbage, very valuable for the home garden, for the market gardener, and for shipping. The handsome heads are conical or pointed, and are usually about 8 inches long, about 6 inches thick near the base, and are firm and solid. The heads average 2½ pounds in weight, which is remarkable when one considers its earliness.

First introduced by us in 1889, Salzer's Lightning was pronounced by one and all the greatest addition for the past FIFTY YEARS to the cabbage family. Produces fine sized, marketable heads in 75 DAYS FROM SOWING OF THE SEED. Thousands of gardeners are now depending on our Lightning for their first early crop. It is very hardy, always sure to head and almost always the earliest in the market. The heads are blanched. The plants resist cold and are very hardy, are compact, have but very few outer leaves, can therefore be planted closely together and yield a large crop per acre.

OUR LIGHTNING is often ripe and solid when other sorts are still in leaves. We consider it without an equal in earliness, richness and deliciousness of flavor. No vegetable pays better than early cabbage. If you are a market gardener, you will want this; if you have a city garden, you cannot get along without it. If you wish the EARLIEST CABBAGE in the world, you must plant SALZER'S LIGHTNING.

218—Pkg., 15c; ½ oz., 23c; oz., 40c; 2 oz., 76c; ¼ lb., \$1.29; ½ lb., \$2.40; 1 lb., \$4.50, postpaid.

SALZER'S EARLIEST CORELESS

The Earliest,
Sweetest,
Most Tender,
and
Only Really
Coreless Carrot
Grown

The peer of all carrots—the grandest carrot in cultivation! Market Gardeners, if you want highest, top-notch prices, you must plant Salzer's Earliest Coreless Carrot. Home Gardeners, if you want to have carrots that will be a real treat for your own table use, carrots that you will take pride in showing to your neighbor, you must plant Salzer's Earliest Coreless. A carrot that we think is in a class all by itself, and has been ever since it was introduced by us over forty years ago.

As in all else, Salzer's Earliest Coreless Carrot reigns supreme in the carrot world. Those who once plant it never discard this incomparable strain. Those who have never planted it, are missing a real treat. Our Earliest Coreless will demonstrate what splendid flavor, what tenderness, what attractive color, what lusciousness, what symmetry, can be bred into carrots. When planting seeds, the best is none too good. It is the cheapest in the end as everyone knows, and whenever you go out in the garden to get some carrots for dinner, you will be mighty glad that you planted Salzer's Earliest Coreless this spring.

It is a beautiful variety. It is exceptionally uniform in shape, of fine texture and entirely free of any heart and is very early, maturing about a week ahead of all other half long sorts, although fully as productive as any of them, the roots usually measuring 6 to 7 inches in length and 1½ inches through.

Salzer's Earliest Coreless in shape and color is one of the most handsome of Carrots. The roots are of cylindrical form, blunt at the end, very symmetrical, smooth skin, fine neck and small top. The color is a beautiful red, brighter and deeper than that of any other Carrot. It is a color that will draw the attention of the buyer on the market.

But the greatest feature of this fine variety is the entire absence of the stringy, coarse heart or core found in so many Carrots. It is of most delicious quality and owing to the fine texture of the red flesh and its tender, delicate flavor, Salzer's Earliest Coreless is called the sweetest of all Carrots by all those who have tasted it.

SUPER SNOWBALL

A superior strain, well named as Super, of Salzer's Early Snowball Cauliflower, about 5 days later but having a larger and heavier head. Matures in about 97 days, producing uniform heads of large size, handsome form, and exquisite quality, which are good sellers in every market. Salzer's Early Snowball is the standard variety by which all other sorts are judged. The heads are smooth, solid, snowy white, with compact curds of excellent flavor and quality. Good for freezing.

SALZER'S EARLIEST SUREHEAD

IT HEADS WHERE OTHERS FAIL

Grandest of all! Whether for forcing or open ground, planted early or late, it is the best, surest header of all. It is particularly desirable for forcing under glass. On our trial grounds every plant produced a **SUPERB HEAD AND SURPASSED ALL OTHER VARIETIES OF EQUAL SIZE IN EARLINESS AND QUALITY.**

The plants are of strong growth with erect, dark green, pointed leaves growing closely about the heads, which are pure snowy white, with very close and compact curds of wonderfully fine quality. The heads are of large size, often reaching 10 inches or more in diameter.

This sureness of heading is highly essential to the market gardener and just as necessary for the home gardener. To make the best heads, cauliflower plants need cool, moist weather, good soil and thorough cultivation. Salzer's Earliest Surehead matures in about 95 days and is a sure header.

317—Pkg., 15c; ¼ oz., 75c; ½ oz., \$1.40; 1 oz., \$2.70; 2 oz., \$5.00, postpaid.

328—Earliest Surehead Salzer's Cliffwood Farm TRIPLE-A-TESTED—A special reselected strain: Pkg., 20c; ¼ oz., 86c; ½ oz., \$1.60; 1 oz., \$3.00; 2 oz., \$5.65, postpaid.

SALZER'S FIRST CROP

A grand, distinct, extremely early variety. A splendid market gardener's variety, with stone-hard, snow-white heads.

Being of dwarf, compact growth, with but a small number of leaves, it is an ideal Cauliflower for forcing during winter and spring. Severe tests have proved it absolutely certain to head when conditions are ordinarily favorable, and also most uniform in growth, type and maturity, the crops being taken off almost clean at the first cutting. One characteristic of this novelty is the close sitting together of the leaves, enfolding the head tightly and causing the inner leaves almost to cover the flower, thereby avoiding the necessity of early tying up.

The heads are very beautiful, solid, snow white, of medium size, which will find a ready sale at the highest prices everywhere and will never fail to be appreciated.

321—Pkg., 12c; ¼ oz., 77c; ½ oz., \$1.42; 1 oz., \$2.75; 2 oz., \$5.25, postpaid.

First
Crop

DRY WEATHER OR DANISH GIANT

Produces stone-hard and snow-white heads, unsurpassed in quality, which average larger than those of the Salzer's Surehead, but are a week later. The foliage is very heavy, fully protecting the heads, which are less liable to blight in hot weather than those of the earlier sorts. As indicated by the name, for dry, hot climates it is to be

preferred to all other sorts, being a sure header there when other sorts fail. Even in the driest weather, it is of a vigorous growth.

316—Pkg., 15c; ¼ oz., 69c; ½ oz., \$1.25; 1 oz., \$2.45; 2 oz., \$4.60, postpaid.

329—Danish Giant, Salzer's Cliffwood Farm, TRIPLE-A-TESTED—A special reselected strain: Pkg., 20c; ¼ oz., 80c; ½ oz., \$1.50; 1 oz., \$2.85; 2 oz., \$5.40, postpaid.

EARLY PARIS

Extremely early, dwarf, having fine white heads, solid and compact curds. Quality is good. This variety is a real bargain and remains very much in demand with our customers. 318—Pkg., 12c; ¼ oz., 68c; ½ oz., \$1.23; 1 oz., \$2.35; 2 oz., \$4.45, postpaid. 326—Early Paris, Salzer's Cliffwood Farm TRIPLE-A-TESTED—A special reselected strain certified by THREE-WAY tests: Pkg., 17c; ¼ oz., 79c; ½ oz., \$1.45; 1 oz., \$2.80; 2 oz., \$5.35, postpaid.

CELERY

BETTER QUALITY-EARLIER

SALZER'S WONDERFUL

Also called Golden Plume! Earliest in maturity, superior eating quality, increased size, beautiful golden color, superior keeping qualities, marked resistance to rust and blight,—these are the outstanding characteristics of this superb celery.

Salzer's Wonderful produces fine stocky plants with large, broad, thick stalks that blanch easily and quickly to a beautiful clear waxen yellow. They are solid, crisp, brittle, tender, of a much superior flavor and quality, and are entirely free from stringiness of any kind. Trials at Cliffwood Farms prove it to be the very earliest celery. This extra earliness spells top prices from the early fall trade, for the trucker, and the earliest, most delicious, crisp and beautiful celery for the home gardener's table use.

Mr. Nick Osner, 622 16th St., Modesto, Calif., writes, "I planted your seed in Ohio. I raised vegetables for the market and liked your Wonderful Celery very much."

The plants are remarkably resistant to blight and rust, a factor of great importance. Earliness, size, attractive color, shape, superior flavor, resistance to blight and rust!—the name WONDERFUL is about the only fitting one for this celery.

345—Pkg., 10c; ½ oz., 32c; oz., 55c; 2 oz., 99c; ¼ lb., \$1.87; ½ lb., \$3.60; lb., \$7.00, postpaid.

347—Salzer's Wonderful, Cliffwood Farm TRIPLE-A-TESTED—A special reselected strain certified by THREE-WAY tests: Pkg., 15c; ½ oz., 36c; oz., 67c; 2 oz., \$1.18; ¼ lb., \$2.15; ½ lb., \$4.10; lb., \$7.95, postpaid.

SALZER'S GOLDEN SELF-BLANCHING

The beautiful appearance of the plant, with its close habit, compact growth, and straight, vigorous stalks is indescribable. The ribs are thick, broad, fleshy and the hearts large and solid. As the plants mature, the inner stems and leaves turn to a beautiful golden yellow. Blanches easily, quickly, and perfectly.

Salzer's Golden Self-Blanching is a vigorous dwarf grower and very early. It is easy to cultivate and in every way a desirable variety. It is planted very extensively and owing to its handsome, waxen-yellow color, its superb quality, entire freedom from stringiness, crispness and tenderness and its delightful, rich, nutty flavor, this variety is most popular and the leading celery in many markets. The strain we handle is grown in the U. S., it is one of the finest in the market and produces plants uniform in growth and color, with heavy, solid stalks.

333—Pkg., 15c; oz., 69c; 2 oz., \$1.20; ¼ lb., \$2.25; ½ lb., \$4.35; lb., \$8.50, postpaid.

SALZER'S SELF BLANCHER

Thick Heavy Stalks, Beautiful, Silvery White Color

Salzer's Self-Blancher has been bred from the White Plume, over which it is a great improvement. It blanches more readily, is earlier, grows more stalks, is heavier and is a much better keeper than the old variety.

Next to Salzer's Wonderful it is the earliest celery that can be grown. We introduced Salzer's Self-Blancher a number of years ago and have kept on improving it year after year, and we believe that now it is more largely grown than any other self-blanching variety. Is of dwarf and compact habit, with light green foliage, stalks are thick and solid, unusually meaty, of a delicious rich flavor, pure white, heavy, tender and crisp. As it keeps so exceptionally well, it is widely grown for fall and winter use.

Many people who have never been able to grow celery before can grow this one to perfection, and succeed with it as well as with other vegetables.

The **LARGEST EARED** and **HEAVI-

SWEET CORN**, bar none. A great
seller at market. **Sixty days from
planting** one should pluck mature
sweet corn, so that at your 4th of July
dinner you can serve sweet, luscious,
tender, finest quality corn on the cob—
ears 10 inches and more in length,
each having 10 to 12 rows, symmetri-
cal, handsome, and with nicely round-
ed rather blunt, tips.

The vigorous stalks grow about five
feet high and frequently produce two

symmetrical and handsome. The
grains, which are tightly set, are
large, deeper than broad, very white,
and are of an exquisite fine quality,
sweet and sugary. Not a hybrid corn.

Celtnuce

SALZER'S CELTUCE

The superb vegetable with a real taste thrill from the interior of China! The young leaves are eaten as lettuce and the matured stalks are peeled of their tough outer skin and the heart eaten either raw, or cooked. Celtnuce is truly delicious, with a taste all of its own, perhaps slightly like celery, but different and milder.

Celtnuce is really a distinct species of lettuce, but grows differently and has more uses. The young leaves are used as lettuce or cooked like spinach. As a raw vegetable, the stalks are peeled and cut into five-inch lengths and split lengthwise, chilled, and served like celery or raw carrots. Also delicious cooked like asparagus or in soups. Sow seed from early spring to July 1. The illustration shows one stalk cut lengthwise. 356—Pkg., 15c; 2 pkgs., 25c; ½ oz., 52c; oz., 99c; ¼ lb., \$3.65; lb., \$12.50, postpaid.

Salzer's Tastygreen
Healthful, Tasty, Superior to
Spinach and Other Greens

TASTYGREEN

Tastygreen, the wonder vegetable, is rich in protein, mineral matter, and other elements so necessary to the development and maintenance of the human system. "Greens" are highly essential to our well-being, and of these, Spinach is perhaps the most widely planted and the most widely used, although unpalatable to many.

Tastygreen, the wonder vegetable, is far superior to Spinach or any of the other greens, and has a delicious flavor all its own, slightly and agreeably pungent with a Mustard taste when served hot, and when eaten raw, the flavor somewhat resembling raw Turnips. Tastygreen has small thin roots, about two inches long, and large oblong shaped leaves, rich dark green color, with a narrow white center rib. The leaves, stem and all, are prepared for table use in the same manner as Spinach or Turnip greens. It is very prolific and bears abundantly. The plants grow quickly and are ready to use in 21 to 23 days after planting.

1107—Pkg., 10c; oz., 22c; 2 oz., 38c; ¼ lb., 64c; ½ lb., \$1.15; lb., \$2.10, postpaid.

Salzer's Tampala

SALZER'S TAMPALA

An old Chinese vegetable, that produces its excellent greens in mid-summer, when spinach bolts to seed, and much finer than Swiss Chard. The leaves are cooked and served just like spinach.

Tampala retains its tenderness for a long time, in fact it requires only five minutes to cook. The branches 4 to 5 in. long may be gathered instead of individual leaves and the young stem tips and leaves may be cooked together. Larger stems (as thick as one's finger) may be separated and cooked 10 minutes like asparagus. Or use Tampala in salads, instead of lettuce. Tasty flavor, high in food value, easily grown, and grows over a long period! 1110—Pkg., 15c; 2 pkgs., 25c; ¼ oz., 38c; ½ oz., 68c; oz., \$1.28; 2 oz., \$2.25, postpaid.

SALZER'S *New* **Giant** **DAISIES** **FOR 1947**

EDGEBROOK GIANT

Size 6 to 7 inches. Height 26 inches. Early.

This new Shasta Daisy has qualities we believe, not possessed by any other variety. It is a giant in size, the largest we have ever flowered. Immense 6 to 7 inch blooms in great profusion, on long straight stems, and with overlapping, closely set petals. The flowers are flat and form holding. Plant is very hardy and resistant. In a variety test, some years ago, with very unfavorable soil conditions, many varieties failed completely while Edgebrook Giant came through without the loss of a single plant.

While the blooms of Edgebrook Giant are wonderful in size and appearance, one of its greatest qualities is its everblooming habit. We have tested hundreds of types and this comes nearer to being everblooming than any other. In 1944 there were scattering blooms all over the field when an early freeze stopped them. This freeze was followed by some weeks of pleasant weather which brought Edgebrook Giant out again, in a wonderful show. **Price: Each, \$1.35; 3 for \$3.75, postpaid.**

MAJESTIC

Size 5 to 6 inches. Height 28 inches. Early.

It is a hardy grower, withstanding unfavorable conditions. Its immense white flowers are real beauties, 5 to 6 inches in diameter, with a small yellow center. Has a double row of straight and overlapping petals making the flowers full and compact, giving it great value in floral designs and bouquets.

The petals of Majestic are very stiff with no drooping. Has 28 to 30 inch straight stems. We believe it is the greatest florist cut-flower variety ever introduced, and equally valuable for the garden. To sum up its good points, it has wonderful large flowers, straight long stems for cutting, is a healthy, strong, vigorous grower, is very hardy. **Price: Each, 95c; 3 for \$2.65, postpaid.**

SALZER'S EARLIEST LETTUCE

**EARLIEST CURLED OR LOOSE LEAVED LETTUCE.
DELICIOUSLY CRISP AND TENDER.**

Yields an abundant crop of attractive light green leaves, heavily curled, of remarkably crisp texture, and of the finest flavor. The quality and flavor even of the outside leaves is fully equal to if not better than the tender heart leaves of many heading varieties. Salzer's Earliest is one of the most widely planted in all sections of the country, and especially in the great West. It is such a strong grower that it thrives everywhere.

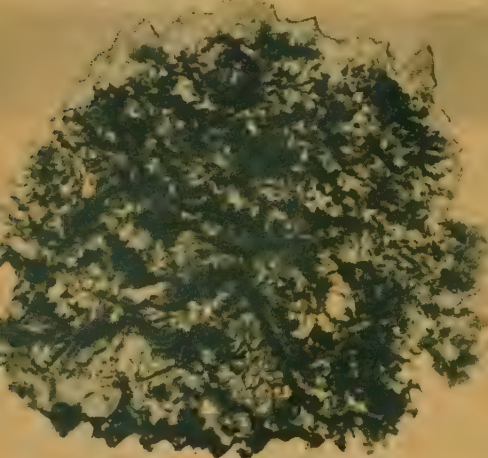

It is an admirable variety for outdoor planting, especially in early spring and it is also most suitable for greenhouse forcing. It is the lettuce for planting all summer long. Extremely popular for winter markets. The lower leaves grow clear of the ground so that it rarely suffers from rot. It is an ideal shipper and will prove most profitable for the grower, whether he sows seed in a hotbed or out of doors. We consider it the best non-heading lettuce for the home garden. Salzer's Earliest Lettuce affords crisp, tender, attractive, finest quality leaves long before the heading sorts have commenced to close up.

Black Seeded Simpson

BLACK SEEDED SIMPSON

One of the standard varieties. A non-heading, curled, bunching, crisp variety, attractive light green color. It reaches a large size, grows quickly, is early, of fine quality, tender and sweet, and thrives during the hot summer months. Easily grown and much used by market gardeners for hot bed culture. 554—Pkg., 5c; oz., 20c; ¼ lb., 59c; ½ lb., \$1.10; lb., \$1.95, postpaid.

WHITE SEEDED SIMPSON

Also known as Early Curled Simpson. A curled or crisp non-heading type, medium large, much crumpled leaves of a light green color. It is an early growing, hardy variety and is sure to give fine results even under unfavorable conditions. Tender, crisp and of excellent quality.

PRIZEHEAD LETTUCE

Is one of the best and most reliable varieties for all-year-around cultivation. The name is a trifle misleading, as it is a loose leaved or curled variety, and does not make a head. Plants form a loose cluster of leaves which are exceedingly tender, quite blistered and crumpled, sweet, crisp, and are of light brown color varying to a medium green base. Salzer's Prizehead reaches a very large size without losing its tenderness or crispness.

SLOBOLT LETTUCE

*Slow To
Go To Seed*

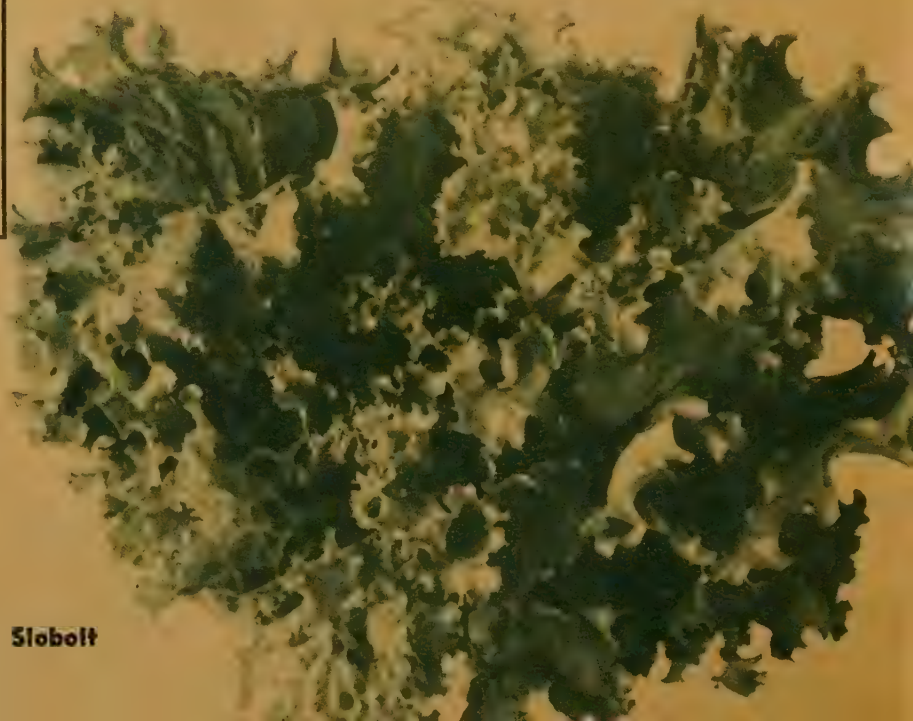

A brand new leaf lettuce developed by the U. S. Dept. of Agriculture, Beltsville, Md., that is slow to bolt to seed!

It withstands the hot summer weather without going to seed, two to three weeks longer than other varieties! If plants are set 10 or 12 inches apart and only the basal leaves used as they grow large enough for table use, lettuce may be had from the same plant for several weeks.

Slobolt has attractive light green leaves that are savoyed and frilled, and is of deliciously tender, crisp quality. You will like it immensely. The seed is black. 542—Pkg., 20c; 2 pkgs., 35c; ½ oz., 34c; oz., 60c; 2 oz., \$1.12; ¼ lb., \$1.95, postpaid.

CLIFFWOOD SUMMER HEADER LETTUCE

CLIFFWOOD SUMMER HEADER

A superb head lettuce that we introduced in 1927, that forms solid heads despite hot weather, a thing which has hitherto been almost impossible. In tests on our Cliffwood Farms, practically every plant formed a fine, firm, solid head of butterhead lettuce of the finest flavor during the heat of summer.

The leaves are light green, crumpled, thick and tender, blanching to creamy white in the center of the head. Heads are large, about 8 to 10 inches in diameter, they have a delicious rich, buttery flavor, and they are the last to go to seed. It stands heat better than any other variety, without wilting.

577—Pkg., 14c; oz., 27c; ¼ lb., 78c; ½ lb., \$1.45; lb., \$2.75, postpaid.

IMPROVED HANSON

Exceptionally early, large globular, crisp heads which are firm and well blanched. The leaves are broad, crumpled and twisted, of light green color, never spotted or brownish. It is of very sweet flavor, and succeeds everywhere and at all times. It heads well during hot weather.

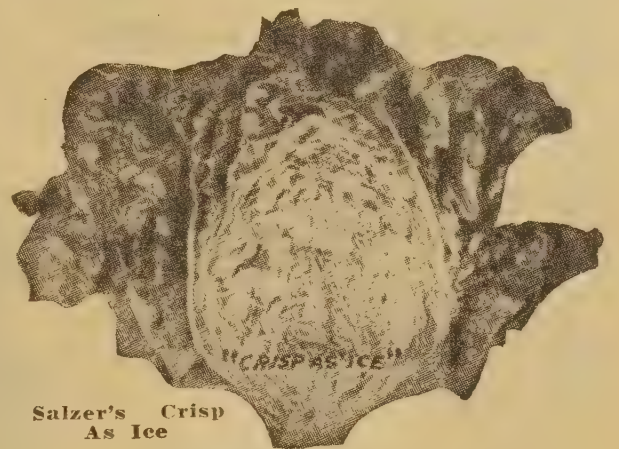

562—Pkg., 10c; oz., 26c; ¼ lb., 77c; ½ lb., \$1.45; lb., \$2.75, postpaid.

SALZER'S CRISP AS ICE

A beautiful lettuce of medium size and medium early. Salzer's Crisp As Ice is a cabbage butter head lettuce, the leaves having a rich, attractive, deep green base, and upper portion covered with dark brown, giving the plant a deep brown or bronze appearance. A cool weather variety, valuable for both early spring and fall.

Has a rich, creamy heart, and when cut open is so crisp and brittle, it was given the name "Crisp As Ice."

556—Pkg., 12c; oz., 33c; ¼ lb., 99c; ½ lb., \$1.85; lb., \$3.50, postpaid.

It is of first class quality, and it forms a fine solid head under any ordinary conditions.

NEW YORK OR WONDERFUL LETTUCE

A curled or crisp heading variety, large, dark green and slightly curled on the edges. It is the most extensively grown of any of the head lettuces by market gardeners, and it is likewise in much favor with home gardeners everywhere. The mature head is flattish globular, and has well folded leaves with the immediate outside leaves slightly incurved to protect the head from sunburn. The heads range from 16 to 18 inches in diameter and weigh from 3 to 3½ pounds each.

The heart is beautifully blanched, creamy white, crisp, tender, and free from any trace of bitterness. It is robust and is a standard hot weather variety. 565—Pkg., 10c; oz., 29c; ¼ lb., 88c; ½ lb., \$1.65; lb., \$3.10, postpaid.

547—New York or Wonderful, Salzer's Cliffwood Farm TRIPLE-A-TESTED—A special reselected strain certified by THREE-WAY tests: Pkg., 15c; oz., 37c; ¼ lb., \$1.14; ½ lb., \$2.10; lb., \$4.00, postpaid.

NEW YORK NO. 55 LETTUCE

Similar to the New York lettuce above, but the color is a brighter green and the head is somewhat better formed, and smoother. Resistant to tipburn and sure heading in warm weather. It is the surest heading strain of the New York type that we know of and practically every plant makes a good head even during hot weather. Considerably resistant to tip burn.

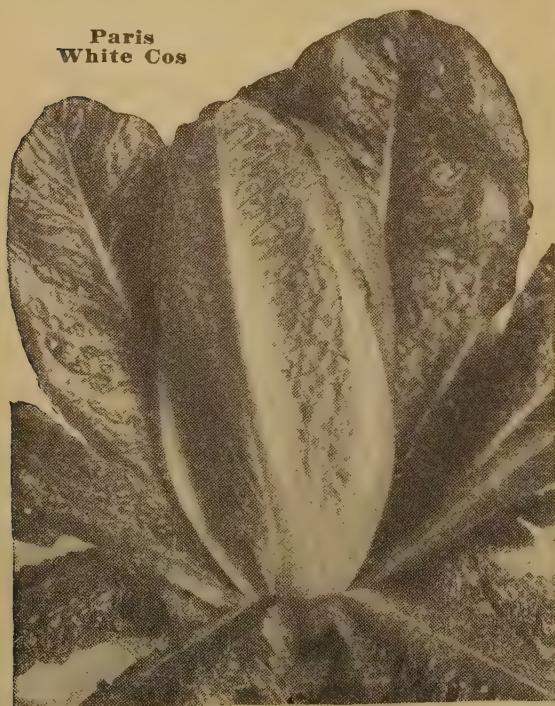

Heads are large, solid, crisp and attractive. New York No. 55 may also be sown late, sowings made about August 1 producing good heads up to heavy frosts. 568—Pkg., 15c; oz., 29c; ¼ lb., 88c; ½ lb., \$1.65; lb., \$3.10, postpaid.

SALZER'S BIG BOSTON

A cabbage head, butter type, medium large, about 11 inches across, finely shaped, globular, medium light green with a slight tinge of brown on margins of outer leaves. It is early and hardy, and stands shipping well. The leaf is smooth and is practically not blistered or crumpled, with a tendency to a bright sheen. Heads are tender, brittle, juicy, fine buttery flavor, and the interior is an attractive light golden yellow. 553—Pkg., 5c; oz., 20c; ¼ lb., 59c; ½ lb., \$1.10; lb., \$1.95, postpaid.

CREAMY HEART LETTUCE

A black-seeded cabbage head lettuce of the butter type, medium green color and of medium size. The head is firm and solid and the heart is a very rich cream color. It has a very firm, tender, buttery flavor, matures early, is slow to go to seed, and stands the heat of summer well.

It is much superior to many of the other butter types of lettuce, both in quality, earliness and ability to form sound, solid heads. Is considered a sure header. 579—Pkg., 9c; oz., 26c; 2 oz., 48c; ¼ lb., 77c; ½ lb., \$1.42; lb., \$2.75, postpaid.

SALZER'S ICEBERG LETTUCE

A most satisfactory crisp heading variety with curly leaves of light green tinged with brown on the edges. It forms a hard head of crisp tender quality, and blanches to a creamy whiteness. One of the best for the home garden and home market. 563—Pkg., 10c; oz., 29c; ¼ lb., 88c; ½ lb., \$1.65; lb., \$3.10, postpaid.

PARIS WHITE COS LETTUCE

Cos Lettuce is distinguished from other lettuce in that the leaves are elongated and somewhat spoon-shaped. It is grown exactly like other lettuce. When full grown, it forms a loose, conical head. Very crisp, tender, and has a delicious flavor. Succeeds very well everywhere, never wilts under the severest sun and can be grown to an immense size. 598—Pkg., 9c; oz., 24c; ¼ lb., 72c; ½ lb., \$1.34; lb., \$2.50, postpaid.

CHINESE OR CHICKEN LETTUCE

In this variety you will find a grand feed that yields more than other green feeds, and that is excellent for poultry. When cut, it grows rapidly again, and may be cut again and again. The yield is extremely heavy; grows 3 to 4 feet high and does not form a head. For table use, it perhaps will be found too coarse. 578—Pkg., 7c; oz., 20c; 2 oz., 37c; ¼ lb., 62c; ½ lb., \$1.18; lb., \$2.10, postpaid.

SALZER'S EARLIEST RIPE

10 CENTS
PKG.

Earliest of All. Our attention was called to this melon many years ago by a gardener near La Crosse, who had always had muskmelons from 8 to 15 days ahead of his neighbors. These Melons were of uniform size, of fine shape and appearance, yellow fleshed, extremely delicious, and sold readily in our markets at top prices.

SALZER'S EARLIEST RIPE IS THE EARLIEST YELLOW-FLESHED MUSKMELON that we know of, maturing in about 60 days. It is of oval shape, of good size, about five inches in diameter, with fairly distinct ribbing, heavily netted. The flesh is thick, of a rich salmon-yellow color, sweet, luscious and melting, and the flavor is unsurpassed by that of any other variety. The vines are robust and vigorous, resisting blight to a marked degree. You will like it. 606—Pkg., 10c; oz., 27c; ¼ lb., 80c; ½ lb., \$1.50; 1 lb., \$2.35, postpaid.

SALZER'S JUICY FRUIT

Salzer's Juicy Fruit, introduced by us over fifteen years ago, is the grandest salmon-fleshed melon in cultivation today, it is wonderfully early, it is a medium sized, it is a heavy yielder, it is very meaty and it has a small seed cavity.

Mr. Joseph Metcalf, R. D. 1, Wilder, Idaho, writes, "My father and I have produced some excellent melons from your Juicy Fruit and from your Honey Dew melon seed."

The skin is an attractive light green, the fruits reach a very large size, they are nearly round with slight sutures, and the thick salmon colored flesh is the sweetest, the most luscious, the most sugary flavored, that we have ever eaten. The melons are uniform in size and pack nicely ten to a crate. This elegant melon is ideal for the home gardener, and truckers always find a heavy demand for the melons at market.

SALZER'S HOLLOW CROWN

Parsnips prefer very wet soil and will thrive where carrots will not grow. A freeze is required to sweeten them. For the best results, deep soil is needed.

Salzer's Hollow Crown is enormously productive, roots are 10 to 12 inches long and about 3 inches thick at the shoulder. It is rich in saccharine, has smooth white skin, is uniform in shape, is sweet, tender, sugary. Not only of fine table quality, but very desirable for stock feeding. Also relished by horses. Matures in 130 days. **832—Pkg., 10c; oz., 18c; 2 oz., 30c; ¼ lb., 52c; ½ lb., 95c; lb., \$1.75, postpaid.**

SALZER'S DELMONICO

Roots reach a length of about 8 inches, with a thick broad shoulder, skin is smooth and white, and the flesh is fine-grained, sweet, sugary, tender and most excellent for table use. Very early, maturing in about 115 days. It is a most prolific yielder, it contains more saccharine, is sweeter and more nutritious than other sorts, and as it is so easily harvested, large acreages are grown for stock feeding. Thrives on almost any soil. This splendid variety surpasses every other in yield and quality. **833—Pkg., 12c; oz., 27c; 2 oz., 49c; ¼ lb., 84c; ½ lb., \$1.50; lb., \$2.75, postpaid.**

SALZER'S GIANT EXHIBITION

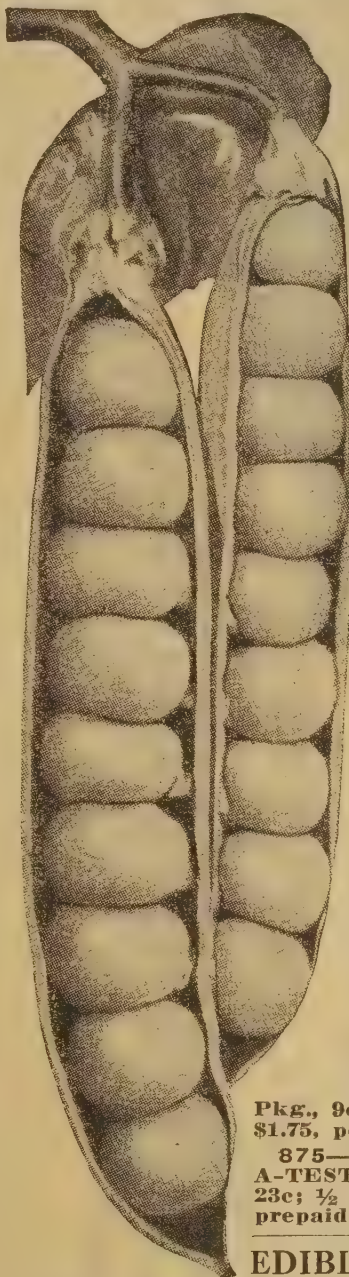

Huge Pods—Luscious Quality Peas

To those who wish huge podded peas, we suggest that they plant Salzer's Giant Exhibition. It is a late maturing kind. Is a wrinkled pea, very productive, the huge pods being well packed with peas, which, although large, are of a fine quality, sweet, sugary flavor and not tough as one would expect. The pods frequently grow to seven and even eight inches in length, depending of course somewhat on the soil, and it is not unusual to find between ten and twelve peas to the pod. The lateness of Salzer's Giant Exhibition is fully offset by its productiveness and its vigorousness. It has numerous first prizes to its credit, from various fairs, which accounts for its being named Exhibition. One of the best main crop varieties. Good for freezing.

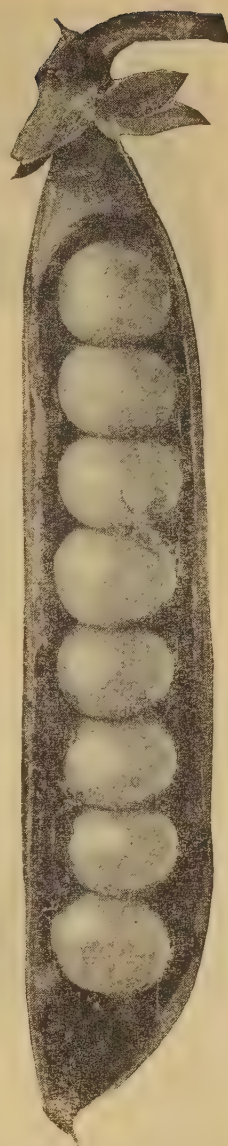

Pods rather straight, with curve near end. Vines grow vigorously. Ready to use in about 85 days. 872—Pkg., 15c; 2 pkgs., 24c; ½ lb., 29c; lb., 47c; 2 lbs., 87c; 5 lbs., \$1.85, postpaid. Not prepaid: 10 lbs., \$3.20; 60 lbs., \$17.10.

These peas are very large and in flavor and sweetness rank with the highest. The peas retain their tenderness long after they have been picked. Also a splendid variety for the home gardener, because of its compact, bushy growth, permitting a good heavy yield in a limited space. 898—Pkg., 10c; 2 pkgs., 18c; ½ lb., 26c; lb., 45c; 2 lbs., 83c; 5 lbs., \$1.75, postpaid. Salzer's

EARLY BIRD

Radish

Handsome—Deliciously Spicy

We introduced this grand variety over 50 years ago and have been extensively developing and improving it ever since, so get your seed from us if you want genuine, true-to-type seed. Don't take anything "just as good." Salzer's Early Bird is of globe-shape, bright scarlet color, has very short tops, flesh is pure white, fine grained, crisp, nice, spicy taste, and never becomes hollow or pithy. Averages $\frac{1}{2}$ to 1 inch in diameter, according to maturity. It is alike most valuable for outdoor planting in spring or in autumn, and usually commands top prices.

Salzer's Early Bird, the incomparable radish, has produced radishes ready for the table in 18 days' time and less, radishes that were uniform in size and shape, uniform in maturity, with small tops and of beautiful and attractive bright red color. It is also one of the best strains for growing under glass.

Mr. Lester Kranich, R. D. 5, Box 110, West Bend, Wis., writes, "Your seeds are the best I have had and your Early Bird Radish can't be beat." Mrs. Gust Orth, R. D. 2, Box 108, Alpena, S. D., writes, "I like your Early Bird Radish very much indeed." Mrs. R. M. Corron, Wasco, Ill., writes, "Your Early Bird Radishes surely are fine. We found them the earliest and the best of any radishes that we planted." Mr. H. W. Lackey, R. D. 4, Box 10, Sioux Falls, So. Dak., writes, "Your seeds are certainly pleasing as to uniformity and trueness to type. Your Early Bird Radishes were particularly good."

If you are at all anxious, either as a market gardener or as a grower of Radishes for your own private table, to have Radishes from 3 to 10 days ahead of your neighbor, and if you are anxious to have the finest Radish that seed can produce, even under the most adverse circumstances, then by all means plant Salzer's Early Bird. Its crisp, brittle flavor, as well as its remarkably quick growth and fine color, alike recommend it.

975—Price of Salzer's Early Bird Radish: Pkg., 10c; oz., 15c; 2 oz., 29c; $\frac{1}{4}$ lb., 56c; $\frac{1}{2}$ lb., \$1.10; lb., \$1.95, postpaid.

Blood Red Snow White Tipped Radish

An Exceptionally Fine Radish

The lively scarlet color points off to a pure white tip, giving it a most attractive appearance. It's perfection itself when it comes to quality and earliness! Splendid for forcing, also fine to plant as a succession variety. Radishes run uniform in both shape and size, averaging about $\frac{3}{4}$ inch in diameter. The skin is thin and tops are very short. The sparkling, snow white flesh is crisp, tender, fine grained and sweet. Does not become pithy or hollow. Matures in about 23 days.

972—Pkg., 10c; oz., 14c; 2 oz., 26c; $\frac{1}{4}$ lb., 48c; $\frac{1}{2}$ lb., 90c; lb., \$1.70, postpaid.

Radish

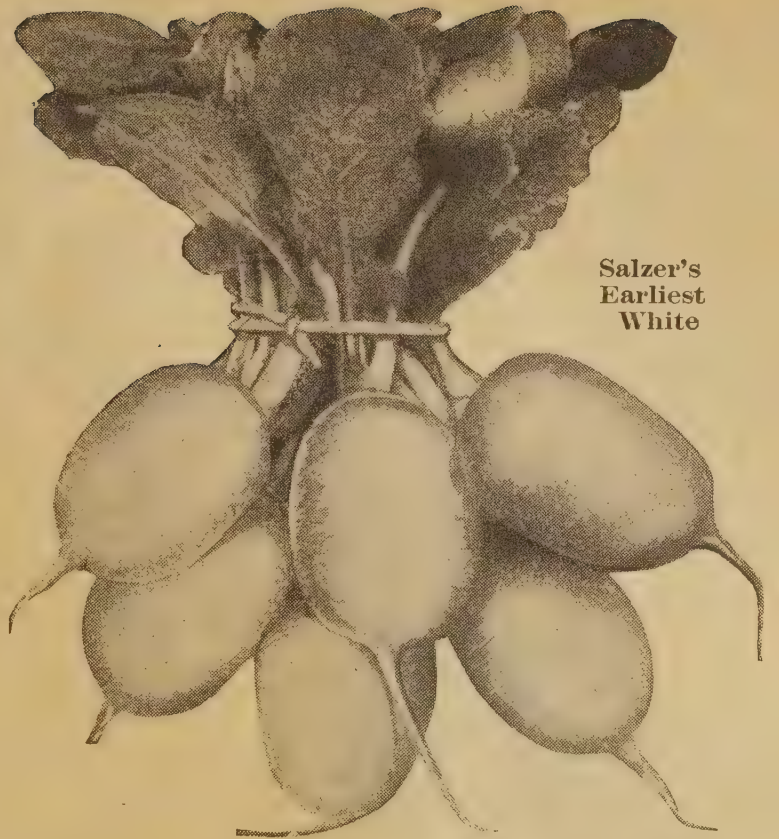

Salzer's Earliest White

Pure white color, almost like crystal, so clear and transparent! Matures in about 18 days. It is a highly developed strain of finest quality and produces some of the earliest radishes that can be grown.

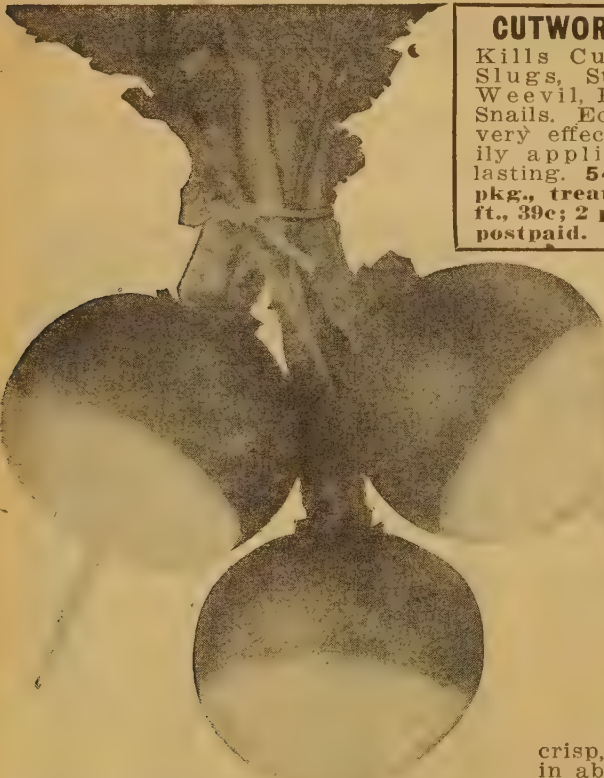

It is of olive shape, is adapted to all soils, has a very short top unusually thin skin, never becomes woody, flesh crisp, tender, and fine spicy taste. Equally good for outdoor sowing or for growing under glass. Home gardeners, sow this and Salzer's Early Bird Radish for the earliest, finest two radishes in your neighborhood. Market gardeners sow these two varieties and make money.

Mrs. Agnes Callahan, 2019 Arapahoe St., Los Angeles 7, Calif., writes, "We think there is no seed like yours, and especially like your Earliest White Radish." Mr. Chase E. Moran, R. D. 1, Irwin, Ohio, writes, "I have ordered seeds from you since 1893. Your Radish seed is extra fine."

Salzer's Earliest of All Tomato

Although introduced by us many years ago Salzer's Earliest of All is still the leading extra early tomato, the earliest large-sized variety grown and we believe, as we are constantly improving it, it will hold its position and will stay on top as the Earliest of All.

With us in the North it has always been a study to produce extremely early vegetables, such as will ripen and produce perfect fruit in a short time, and in Earliest of All our efforts have been successful. Everybody who has tried it speaks of it in highest praise. Earliness in tomatoes is essential for the market grower and highly desirable for the home garden. Salzer's Earliest of All is the best extra-early so far produced; it is our very earliest strain; it is a "short season" tomato. Ripening in about 57 days, after setting out the plants, it is especially adapted to all sections of the country, which makes it so decidedly popular. Finely bred for uniformity in size, attractiveness, extra earliness, and trueness to type, Salzer Quality is nowhere better evidenced than in this fine, highly praised variety. If you want the very earliest tomatoes, combined with fine flavor, meatiness, productiveness, attractiveness, and tenderness,

you should plant our Earliest of All. It is bound to please the most particular.

The fruits are of good size, brilliant scarlet color, nearly round, entirely smooth, and remarkably handsome. The flesh is solid, and of the finest flavor. The fruits are borne continuously in large numbers until killed by frost. They have a tough skin, firm flesh, making them good shippers and keepers.

Mrs. Harold Kufahl, R. D. 6, Box 149, Merrill, Wis., writes, "We have never had such nice tomatoes, nor so early, as Salzer's Earliest of All." Mrs. J. T. Yoder, 2139 E. Philadelphia St., York, Pa., writes, "We have been more than delighted with your Earliest of All Tomato and Lightning Cabbage." Mr. S. B. Bristow, 1238 East Michigan St., Evansville, Ind., writes, "I have never had a better early tomato than Salzer's Earliest of All." Mr. Zelle F. Mills, Box A, Bartlett, Ill., writes, "We especially liked your Earliest of All Tomatoes last year." Mr. Roy Rider, Roll, Ariz., writes, "Your Earliest of All Tomatoes were the earliest we ever had."

Scarlet Topper is enormously prolific and yields a heavy tonnage of tomatoes of large size. Vines are medium dense, erect, and SELF-TOPPING. The main shoot, after forming two or three-flower clusters, usually terminates in a flower cluster, checking vegetative growth much the same as cutting out the top, hence the name. 78 days. Fine for the home gardener. 1163—Pkg., 10c; oz., 49c; 2 oz., 90c; ¼ lb., \$1.65, postpaid.

**SALZER'S
IMMENSE
FERRIS
WHEEL
TOMATO**

SALZER'S FERRIS WHEEL

The tomato is recognized by the medical profession as holding five points of merit which makes it actually indispensable in the vegetable garden. It is the richest of all foods in vitamins; it is the most wonderful and effective blood cleanser of all foods; it is the best of all vegetables for keeping the stomach and intestines in condition; it is an extraordinary tonic for the kidneys, and it is used widely in curing diabetes and Bright's disease. In addition, it is extremely valuable for feeding the juice to infants, accomplishing wonders in cleansing and building up the tiny stomachs. Every garden in the U.S. should contain at least a few tomato plants. Plant some this year!

Salzer's Ferris Wheel is of the large Ponderosa type and averages about 1 3/4 pounds in weight, although at Cliffwood Farms we have grown specimens weighing over 4 pounds. Fruits have thick, solid, meaty flesh, which is of the finest quality, delicious, sub-acid flavor and very small seed cavity. The vines are strong and vigorous and easily bear their enormous weight of fruits which are of handsome appearance, smooth, and which have a rich, dark purplish-crimson skin. Salzer's Ferris Wheel has been continually developed for immense

size, uniformity, flavor, productiveness and to resist any tendency to split. Matures in about 90 days. A grand tomato for the home gardener as well as for market gardeners. Mr. Wm. Stewart, Box 180, Roslyn, Wash., writes, "The Ferris Wheel Tomatoes are grand and have a wonderful flavor." Mrs. Albert G. Smith, R.D. 3, East Aurora, N.Y., writes, "I had very good success with the Ferris Wheel Tomato, and also the other seed ordered from you. We were very well pleased."

1139—Pkg., 15c; 1/2 oz., 63c; oz., \$1.19; 2 oz., \$2.15; 1/4 lb., \$3.85, postpaid.

SALZER'S IMPROVED PONDEROSA

Rightly named "Ponderosa" because of the large size it attains. Fruit is very solid, with few seeds. Very often large tomatoes, from their very size, are rough and have a tendency to split, but we selected this seed so exhaustively that we have removed the roughness and splitting tendency as far as it is possible to do so.

Vines are vigorous and productive. Fruits large, oblong, purplish red, with thin skin. Flesh is solid, with a very small seed cavity, making it a most desirable variety for slicing. To all who desire large size, solidity and flavor, we unhesitatingly recommend it. Requires about 85 days to mature. Miss Sophia Scherer, 618 West 3rd St., Mt. Vernon, Ind., writes, "Your Improved Ponderosa Tomato, Earliest Of All Tomato, and Early Bird Radish can't be beat."

1142—Pkg., 10c; oz., 93c; 2 oz., \$1.75; 1/4 lb., \$3.25, postpaid.

1133—Improved Ponderosa, Salzer's Cliffwood Farm TRIPLE-A-TESTED seed: Pkg., 15c; oz., \$1.15; 2 oz., \$2.15; 1/4 lb., \$3.75, postpaid.

Salzer's Select Stone

King of the red tomatoes! The leading main crop variety, extensively grown by market gardeners, ideal for the home garden. Grown extensively by canners for tomato soup, etc. Best of all for tomato juice.

Vines are large, strong, and productive. It is a smooth, large tomato, nice and solid, free from core and cavity. Nearly round in shape. The eating quality is exceptionally fine, has no superior for slicing or canning. Fruits are bright scarlet. Our strain of this variety is carefully grown, selected, rogued and cured. Matures in about 85 days.

1122—Pkg., 5c; oz., 44c; 2 oz., 82c; 1/4 lb., \$1.35, postpaid.

1132—Select Stone, Salzer's Cliffwood Farm TRIPLE-A-TESTED — A special reselected strain certified by THREE-WAY tests. Pkg., 10c; oz., 49c; 2 oz., 92c; 1/4 lb., \$1.65, postpaid. Tomato Plants, See Page 19.

Peak of Perfection

COLOR-TRU SEED—The seeds of this variety have been stained VIOLET to insure customers receiving true seed. Accept no other.

If it is size you want, and just a luscious, deliciously good, all around tomato, then you must plant Salzer's Peak of Perfection!

We gave free seeds of this tomato to our customers and friends in 1927 under the name of New Wonder and offered prizes for the largest tomato grown and for the best name for this beauty. Mr. Acro Castle, Hueysville, Ky., won the prize of \$25.00 cash for the largest tomato with a weight of 4 pounds 7 ounces. Think of a monster tomato like that! Mr. Rudolph C. Gehlker, 6652 Kennedy Ave., Cincinnati, Ohio, writes, "I have been raising your Peak of Perfection Tomato for several years and figure they are the best tasting, largest, and with the least seeds, of any tomato." Mr. Charles Green, 723 West Pearl St., Baltestville, Ind., writes, "For quite a few years, I have used your Peak of Perfection and Ferris Wheel Tomatoes, and have grown some really large, fine, slicing tomatoes."

Peak of Perfection is practically free from seeds. The tomatoes are of a beautiful appearance, uniformly large and smooth, with a rich dark crimson skin, meaty, and have a delicious, melting flavor. All esteem it the finest flavored tomato they have ever eaten. But combined with this delicious flavor is the enormous size! 90 days. 1131—Pkg. 17c; ½ oz., 65c; oz., \$1.22; 2 oz., \$2.19; ¼ lb., \$3.95, postpaid.

RUTGERS

Originated by Prof. Schermerhorn of the New Jersey Agricultural Experimental Station. Rutgers is outstanding for the large size and solid structure of the fruit! Skin is dark red, with thick outer and inner walls, very small seed cavities, and the interior color is a beautiful dark red.

Matures in about 85 days and the yield is very large, ripening an abundance of fruit even in the far northern climates, before the vines are killed by frost. It makes juice of low acidity and fine flavor and is a good canner, maintaining its firmness and deep red color when canned. Especially good for light sandy soils since the vines offer much protection for the fruit. Has yielded over 10 tons per acre! 1120—Pkg., 10c; ½ oz., 26c; oz., 47c; 2 oz., 88c; ¼ lb., \$1.50, postpaid.

MARGLOBE, DISEASE-RESISTANT

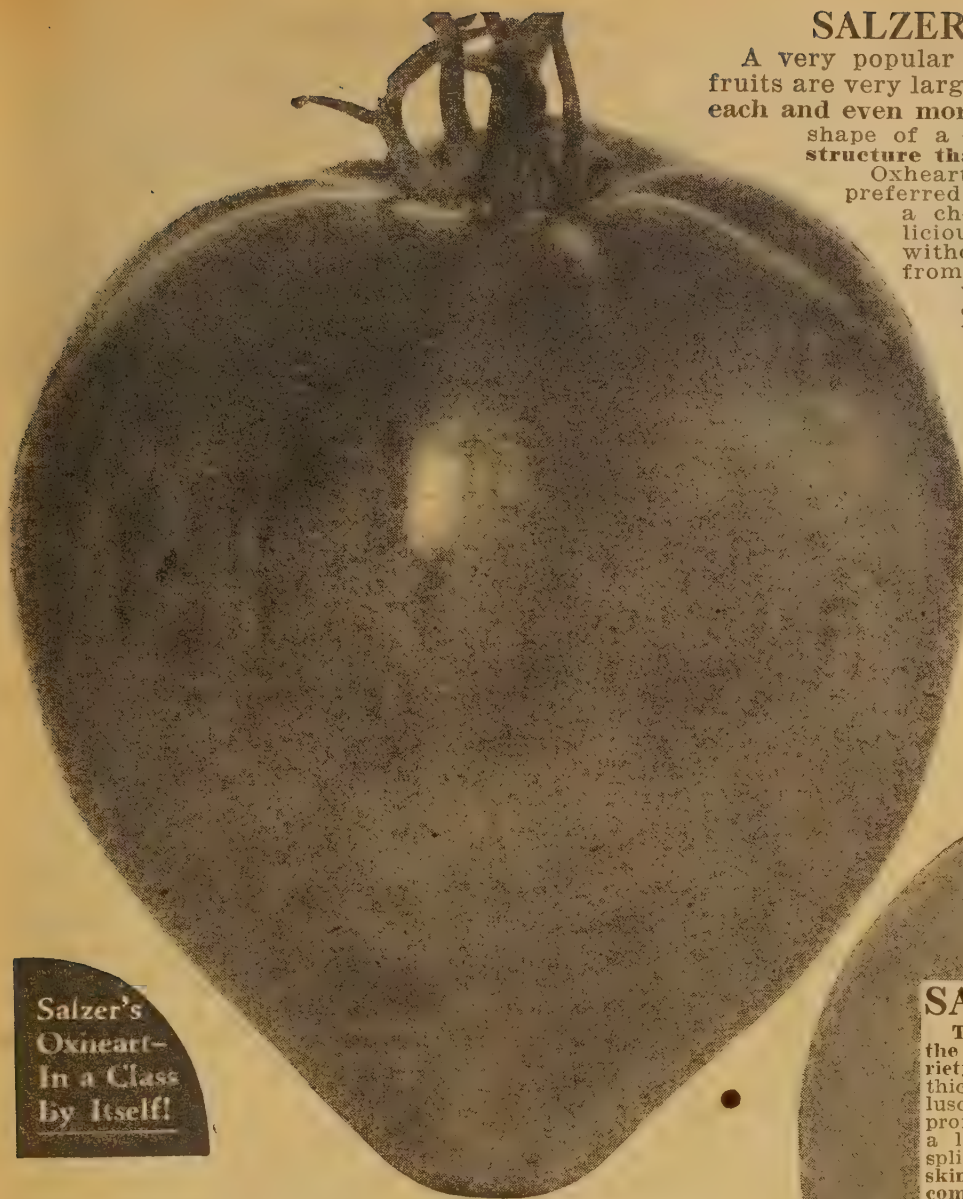

Marglobe is a cross between the Marvel and Globe tomatoes, developed by the U. S. Department of Agriculture, combining the second earliness of the former with the fine table quality of the latter. Marglobe is of fine scarlet color, globe shaped, of fine texture, deliciously mild in flavor, and wilt-resistant to a marked degree. Plants are of vigorous and heavy growth and very prolific. We have a record of one plant, on diseased soil, producing 107 large, fine round, best quality tomatoes. 80 days. Fine for tomato juice. Gives fine satisfaction in all sections. 1130—Pkg., 10c; ½ oz., 27c; oz., 47c; 2 oz., 88c; ¼ lb., \$1.59, postpaid.

SALZER'S OXHEART TOMATO

A very popular late variety, maturing in 90 days. The fruits are very large in size, often weighing one to two pounds each and even more, are purplish-pink in color, smooth, the shape of a beef heart, and with such a solid internal structure that there is very little room left for seed.

Oxheart is of very mild and sweet flavor which is preferred by many people to the more acid flavors. Is a choice tomato for salads, with its thick, delicious flesh! The flesh often shows an inch thick, without a single seed cavity. Receives its name from its shape, which is large at the stem end, tapering almost to a point. Vine growth is open and spreading, the fruits setting in clusters of 3 to 7.

1177—Pkg., 15c; ½ oz., 65c; oz., \$1.22; 2 oz., \$2.19; ¼ lb., \$3.95, postpaid.

SALZER'S NORTON WILT-RESISTANT

If you have been troubled with wilt, plant Norton Wilt-Resistant Tomato. Has yielded 300 bu. to the acre on soil affected by wilt, while other varieties next to it, yielded 25 bu. The tomatoes ripen nice and solid on the vines. Firm, solid skin, is a wonderful shipper, of fine flavor, meaty, few seeds and very tender. Is a mid-season tomato, globular, and of a beautiful scarlet color. Fine for tomato juice.

We recommend sowing early in Spring, if possible before the ground is shaded to any great extent, using one pound to 150 square feet. Sow one pound to 200 square feet. 4529—½ lb., 50c; 1 lb., 93c; 2 lbs., \$1.60; 5 lbs., \$4.00, postpaid. Not prepaid: 10 lbs., \$7.25; 25 lbs., \$18.00; 100 lbs., \$70.00.

Wilt-Resistant Asters

Loss of seedlings or transplanted plants, stunted, one-sided and off color plants in those that survive, dark colored streaks in the stem, yellowing of the upper leaves and death of the lower leaves are characteristics of Aster wilt or Aster stem-rot. The wilt organisms are capable of prolonged existence in one's soil and the only remedy is WILT-RESISTANT SEED.

This seed is practically immune to wilt and stem rot and produces flowers on soil upon which ordinary seed would not possibly grow. In one severe test, plants from this wilt-resistant seed grew splendidly while 93% from ordinary seed succumbed. We offer wilt-resistant seed of the following:

The Best Barley for Malting Purposes.

Wisconsin Barbless or Wisconsin Pedigree No. 38 Barley is a bearded variety that was originated by the Wisconsin Experiment Station by crossing a smooth awn oat from Russia with Oderbrucker barley. It is a remarkably heavy yielder, with heavy, large and plump kernels.

The greatest feature of all, however, is the freedom from the troublesome awns in the beards. The smooth beards of Wisconsin Barbless Barley make it easier to handle and makes both the straw and the grain more valuable for feeding. It is six rowed, has very stiff straw and is resistant to disease. It is a big improvement over the rough bearded barleys. Resistant to stripe disease. Sow 1½ to 2 bu. per acre.

Medium Red, Mammoth, Alsike, Sweet Clovers and All Field Seeds Are Subject to Change Without Notice. Please Order Early.

CLOVER MEDIUM RED

Medium Red, the most important clover, lives two years or more, grows about two feet high and makes two crops a year, yielding about three tons of cured hay per acre. Clover hay is very nutritious, stock fed on it requiring less grain. Does well on a great variety of soils, thriving luxuriantly on strong, well drained loams. It is the best for crop rotations and increases succeeding crops from 25 to 60%. Sow 15 lbs. per acre. Our Radium Brand Clover is among the finest obtainable. It is our best grade, and tests around 99% in purity; the most of it is 99½% or better, and it is free from noxious weeds. Our Superior Brand tests about as high, free from noxious weeds, but it is not quite as fancy in appearance. Wisconsin and Minnesota grown. Bags free.

NORTHERN GROWN TIMOTHY

Timothy is the king of all grasses in our country; as a hay crop it has long been the standard and it is adapted to a wider range of conditions and is grown over a wider area than other grasses.

Sow 10 to 15 lbs. per acre. Our seed is either Wisconsin or Minnesota grown and carefully cleaned, with a purity of 99.5% or better. For hay, cut when the seed is in the "milk" stage, setting the mower so it cuts a full four inches above the ground. 45 lbs. in 1 bu. Ceiling prices on Timothy, or lower.

OATS

WHITE CROSS OR WISCONSIN PEDIGREE No. 19—A high yielding extra early white oat, with a taller straw and a larger kernel than is usually found in early oats. The tall straw is desirable in localities where the soil is light. A good rust-resister. Has a tendency to lodge on rich soils, but is well adapted to sandy soils. 4625—Prices above.

STATE'S PRIDE OR WISCONSIN PEDIGREE No. 7

Earliest yellow oat. In spite of unfavorable weather, State's Pride yielded 75.7 bushels per acre. Earliest of all yellow oats and best as a nurse crop and escapes rust, because of its earliness. Does not lodge easily, but fills out the kernels if it does, making it especially desirable for rich soils. Has a very short, stiff straw. It is a yellow oat, bright, thin hulled, meaty and is about the best oat. 4623—See prices above.

60-DAY, JULY OR KHERSON—It is a small, yellowish oat with a very thin hull and practically all meat, and with short, stiff straw. Does not lodge easily. Sixty Day Oats are extremely early and are especially fine in a dry season. They usually yield 70 to 80 bushels per acre, at least. It adapts itself readily to the different soils. Matures in about 80 days, rather than 60 as the name indicates. 4616—See prices above.

SALZER'S SILVERMINE—This variety is reputed for its heavy yields and is a fine second early white oat, very robust and vigorous and seldom lodges. The heads are borne low on strong, stiff straw which is unusually bright and clean. The kernels are white, plump, heavy and thin hulled. Endures extremes of dry, wet, hot and cold weather. 4615—Lb., 31c; peck, \$1.13, postpaid to 4th zone. Not prepaid: Peck, 75c; ½ bu., \$1.20; bu. (32 lbs.), \$2.00; 2½ bu., \$4.75; 5 bu., \$9.25; 10 bu., \$18.25; 20 bu., \$36.15. Bags free.

VICLAND OATS—Vicland is an early yellow oat, very high in bushel weight, that has yielded over 85 bushels per acre, very resistant to rust and to smut!

On rich soil, the straw reaches a good height but on poor soil the straw is apt to be too short to cut with a binder. Vicland will stand in the shock a long time without germinating, which is most desirable in rainy weather. 4607—Price of Vicland Oats: Peck, \$1.06, postpaid to 4th zone. Not prepaid: Peck, 68c; ½ bu., \$1.10; bu. (32 lbs.), \$1.75; 3 bu., \$5.10; 6 bu., \$9.95; 9 bu., \$19.75. Three bags (9 bu.) plant five acres. Certified Seed: 3 bu., \$6.85; 9 bu., \$19.95, not prepaid.

SALZER'S WHITE BONANZA White Bonanza is a heavy mid-season variety, extremely productive, with strong, stiff straw, bearing long heads filled with good-weight grain. It has demonstrated its ability to produce fine crops on sandy land and on the fertile prairie or clay loam soils. A dependable white oat that ripens in about ninety days. This variety is hardy, having been grown successfully in Canada, in sections about 1,000 miles northwest of La Crosse. "Bonanza" is our own Registered Trade Mark. 4614—Lb., 32c; peck, \$1.17, postpaid to 4th zone. Not prepaid: Peck, 79c; ½ bu., \$1.25; bu. VANGUARD OATS A mid-season white oat from Canada, open panicle, high yielding and resistant to black stem rust! The straw is stiff. We recommend it highly, especially for Northwestern Minnesota and similar latitudes. 4627—Lb., 31c; peck, \$1.13, postpaid to 4th zone. Not prepaid: Peck, 75c; ½ bu., \$1.20; bu. (32 lbs.), \$2.00; 2½ bu., \$4.75; 5 bu., \$9.25; 10 bu., \$18.25. Bags free.

REED'S CANARY GRASS

Or Phalaris. A grass for wet, low-lying, poorly drained soils—in fact, the only grass we know of for reclaiming waste, marshy lands.

The hay is a little coarse, especially if it is left to grow too long, but it is nutritious and tasty and all stock like it and relish it. Underground stems will form a tough sod and hold hay machinery. Yields up to 4.57 tons of hay per acre from two cuttings. Cut the first crop for hay as soon as the heads or panicles appear.

Broadcast 5 to 6 lbs. per acre or drill in ½ in. deep, 2 to 3 lbs. in 18 in. rows. If covered with water, wait till the water recedes and then sow. 4511—Radium Brand—½ lb., 57c; 1 lb., 95c; 2 lbs., \$2.05; 5 lbs., \$4.79, postpaid to 4th zone. Not prepaid: 10 lbs., \$8.85; 25 lbs., \$21.75; 50 lbs., \$42.95; 100 lbs., \$85.00.

Salzer's Timothy

SALZER'S BILLION DOLLAR GRASS (Panicum Crusgalli)

Especially Valuable for Silo and for Feeding Green—A Substitute For Corn Fodder
Green Feed on August 1st

Salzer's Billion Dollar Grass furnishes a heavy amount of desirable green feed during August! Sown about the end of May, the fodder will be ready to cut about August 1st or a little earlier! Begin to cut it before it blossoms and continue to cut for about 12 days or until the stems toughen. By making a second seeding about June 10 and a third about June 25, abundant green feed may be had during all of August and with later seedings, into September!

Salzer's Billion Dollar Grass gives a heavy yield of green fodder, from 12 to 18 tons per acre on naturally moisture-retentive land in good condition, but heavier yields of up to 35 tons per acre have been reported. Yields anywhere up to 60 bushel of seed per acre (32 lbs. per bu.), although 90 bushel of seed per acre have been reported, and it yields from 3 to 6 tons of hay per acre.

A Quick Producer

Salzer's Billion Dollar Grass produces green feed, and plenty of it, in about nine or ten weeks and attains the height of four to seven feet according to the richness of the soil. It is the one grass to sow if you want plenty of green feed during August and September for your cattle, horses, sheep, hogs and poultry.

Up to 90 bushel (3,150 lbs.) of seed per acre! Hogs, poultry, geese and turkeys relish the green feed and thrive and fatten if fed the seed during the fall and winter months.

By cutting as soon as the plants come into bloom, a second crop may often be had and the yield of forage materially increased. When grown for seed, it gives only the one crop and sometimes some pasture thereafter.

Salzer's Billion Dollar Grass gives 3 to 6 tons hay per acre but as it is rather coarse and succulent it is difficult to cure for hay and we do not recommend it for that purpose. Since it is difficult to dry, the hay may become musty and so one cannot depend upon a large amount of dry hay. However, if the weather allows several extra hay days to follow one another, it is successfully cured in small cocks as clover is often cured.

Use Salzer's Billion Dollar Grass as silage in place of corn wherever it is not possible or convenient to grow corn. It is a wonderful "catch crop" whenever the corn has been destroyed by hail or otherwise.

Where It Grows

It grows best on a soil that is rather retentive of moisture and quite rich. It luxuriates on a low, rich, moist situation but it also does well on higher ground. When it is sown on retentive soil, it endures drought fairly well. On the rich soils of the West and Northwest where there is sufficient moisture, or where there is irrigation, it yields heavily and it has given good yields on the alkali soil so common in parts of the West. In the Mississippi Valley, it yields abundantly.

When a Cold Wet Spring

floods out your corn or damages other crops, Salzer's Billion Dollar Grass is an ideal catch crop. We have had customers plant it as late as the middle of August, as a catch crop, but to get best results, we recommend planting it up to July 1 or possibly July 15. You will find

Billion Dollar Grass of great value in case of a crop failure of clover and timothy in a dry spring.

It Is Productive

Under average conditions of moisture and fertility of the soil, Salzer's Billion Dollar Grass is one of the most productive of the annual hay grasses. Think of yields of up to 20 tons of fresh green feed per acre, up to 6 tons of cured hay per acre, or up to 3,000 pounds of seed per acre! Its biggest and its greatest value, however, is in its green fodder and in its silage.

Feeding Green

Salzer's Billion Dollar Grass cut from day to day and fed green to cows, is much relished. Cows invariably increase in milk when green Billion Dollar Grass is alternated with corn fodder.

Fed continuously and alone, Billion Dollar Grass acts as a laxative and a diuretic, and the ideal feeding is about 10 pounds hay per day, plus about 50 pounds green Billion Dollar Grass per day.

For Silage

Over 18 tons ensilage per acre! Billion Dollar Grass is not as nutritive as corn silage, yet it makes a very fine silage and makes a fine substitute if the corn crop fails or if corn cannot be grown. For ensilage, cut in late bloom or when the seed is beginning to form. If cut after it has ripened its seed, it will then be too dry and tough. Filling the silo with two parts by weight of Salzer's Billion Dollar Grass and one part of Soy Beans makes a very superior silage.

What It Is

Panicum Crusgalli is a Japanese Millet and was given the name Barnyard Millet in 1896 by Prof. W. P. Brooks of the Hatch (Mass.) Station. In 1901, we first offered it to the public and gave it the name Billion Dollar Grass because of its tremendous yield of fodder and seed, and it is probably more widely known today under this name than any other. It is not poisonous at any stage of growth and is distinct from Sudan Grass.

Culture

Salzer's Billion Dollar Grass is a tender annual and should not be sown before corn planting time as it does not stand frost. Sow about 20 pounds per acre broadcast, covering about 3/4 inch deep. May be sown up to July 1 and even up to the end of July.

PASTURE—All rich, luxuriant grasses should be pastured moderately at first. Therefore, you should turn in your hogs, cattle, sheep, and horses the first few times only after they have had a good feed elsewhere and thus accustom them to it. It is on the same plan as hungry stock turned the first time into a field of rich clover—they might find harm. Turn them into Billion Dollar Grass moderately at first and you can soon permanently.

FOR HAY—Cut when the plant is in early bloom. Cut with a mower and allow it to cure in the swath for a day; then rake into windrows and when sufficiently cured, put it into cocks for about a week.

FEEDING GREEN—Begin to cut before it blossoms and continue until the cattle do not eat all of the stems.

FOR SEED—Let Salzer's Billion Dollar Grass get thoroughly ripe and cut and thresh as you would Timothy. The seed is about equal to oats in composition, that is in protein and fat.

SOW SALZER'S SEEDS

Your Irish Cobbler Potatoes do well here, and they are fine quality. All your seeds are very good.—Mrs. Nick Moenssens, R.D. 1, Box 4, DePere, Wis.

SALZER'S EARLY SIX WEEKS POTATOES

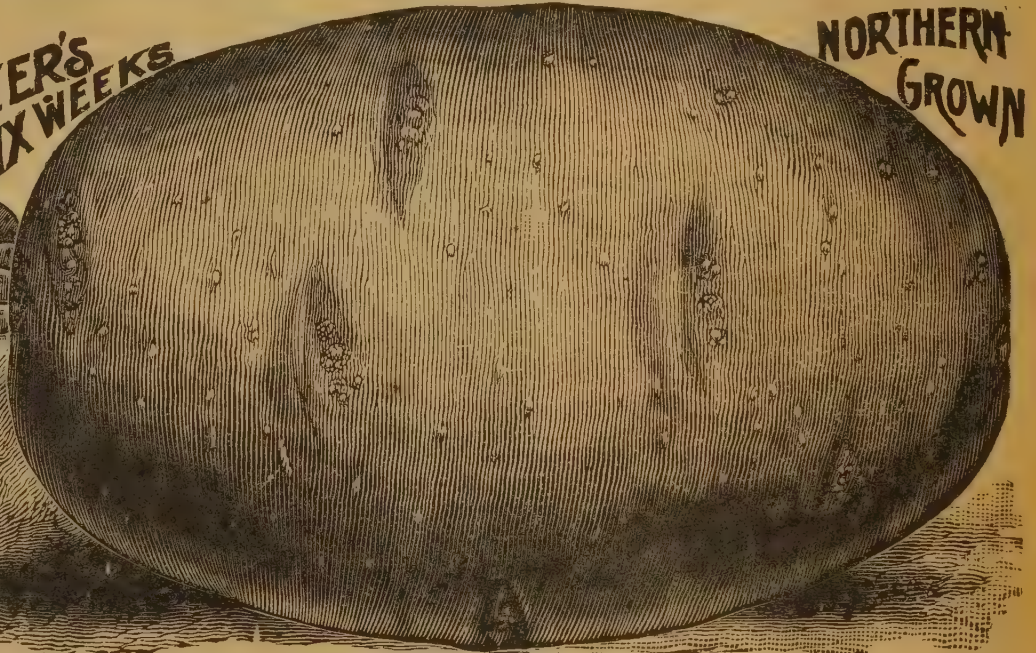

We are nationally known as the largest retail seed potato house in the country, and we probably handle more potatoes than any other company. Our seed is grown in the fertile Eagle Valley and Red River Valley of Northern Minnesota, two districts which have not as yet been surpassed for quality seed. Prices should not be judged by the price of eating potatoes. Our potatoes are grown primarily for seed purposes and all of them are U. S. Gov't. Grade No. 1. We believe you will be well pleased with them. U. S. Grade No. 1 requires that the potatoes be practically free from scab, blight, dry rot, and damage caused by disease, and be graded to a minimum size of 1 7/8 inches. 60 lbs. in one bushel.

Salzer's Early Six Weeks stands alone as the great earliest general purpose Potato! It is ahead of Salzer's Earliest in quality and yield, although not quite so early, but is 10 days earlier than the famous Early Ohio Potato. There is another great advantage in planting Salzer's

Early Six Weeks Potatoes and that is that it has never failed to produce a good crop of extremely early, very large tubers.

Salzer's Early Six Weeks is fit for market everywhere in six to eight weeks. It is good for midsummer, good for late summer, good for fall, and magnificent to put into winter quarters, where it will keep splendidly and give you the finest flavored, best quality eating Potatoes imaginable. If we had but one Potato to plant, this would be the Potato every time.

Skin is pink and smooth. The flesh is white and cooks mealy. Round to oblong in shape. Salzer's Early Six Weeks Potato is one of the best market varieties for all sections of the country. Please give date we shall ship your potatoes. Price of Salzer's Early Six Weeks: U. S. No. 1: 2 lbs., 42c; 5 lbs., 79c, postpaid to 4th zone. Not prepaid: Peck, \$1.10; 1/2 bu., \$1.85; bu. U. S. No. 1: 2 lbs., 32c; 5 lbs., 60c, postpaid to 4th zone. Not prepaid: Peck, 80c; ½ bu., \$1.45; bu., (60 lbs.), \$2.65; 100 lbs., \$3.90; 500 lbs., \$19.15.

Sebago
Potatoes

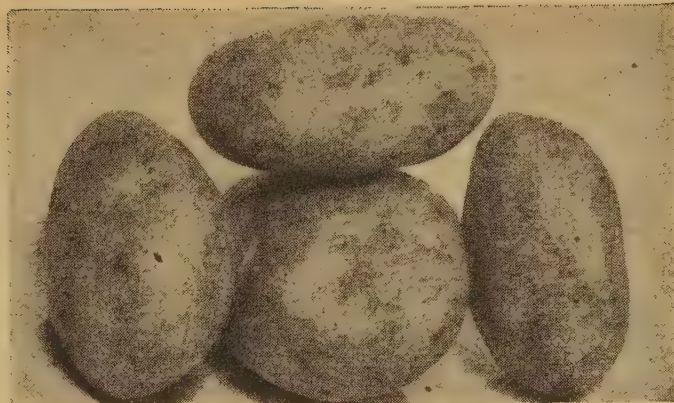

SEBAGO

About the best late potato for Wisconsin, and equally good for other states. It is not a good yielder on poor, sandy soil, but on fertile soil it yields heavily, it is of high quality, it cooks white, seldom shows hollow heart or internal discoloration and hardening, and it is resistant to yellow dwarf disease and to the late blight which causes a form of tuber rot.

Sebago potatoes are white, thin skinned, shallow eyed, and oval to oblong in shape. The vines are large and vigorous, of upright habit. During hot weather it may roll its leaves but this has no connection with the Leaf Roll Disease. U. S. No. 1: 2 lbs., 32c; 5 lbs., 60c, postpaid to 4th zone. Not prepaid: Peck, 80c; ½ bu., \$1.45; bu., (60 lbs.), \$2.65; 100 lbs., \$3.90; 500 lbs., \$19.15.

A Field of Manchu Soy Beans

SOY BEANS

Soy Beans make a good growth on poor soils, especially if inoculated, succeed on acid soil, will grow as far north as corn and as far south as cotton, they make a splendid rotation crop, and they build up the soil. Cut for hay any time after the pods begin to form. Sow 45 lbs. in drills per acre, or 2 bu. (120 lbs.) broadcast. Inoculate with Nod-O-Gen before planting. Any variety, 2 lbs., 49c, postpaid to 4th zone. Bags free. Edible Soy Beans, see Page 9.

One of the very best of the early soybeans, especially fine for Southern Minn., Wis., Michigan, Northern and Central Iowa, and similar latitude. Fine for late planting further south. The seed is light straw-yellow color, medium size (2750 per pound), with an average of 3 beans per pod. The plant is medium to tall in height and it is adapted to a wide range of soils. The lower branches and pods are well off the ground which reduces harvesting loss. Heavy yielder. On a moisture free basis, the beans average 20% oil of a high drying quality. Protein, 43 to 45%. 4305—Radium Brand: Not prepaid: Peck, \$1.68; ½ bu., \$2.90; bu. (60 lbs.), \$4.95; 2½ bu., \$12.25; 5 bu., \$24.35. Bags free.

Mandarin or Wis. 507 has yielded up to 28.8 bushel per acre, with an oil content of 18.52 per cent, and is well adapted to the corn zones of 95 to 100 days' maturity. It is one of the earliest soys. Seed is straw yellow. 4306—Radium Brand: Not prepaid: Peck, \$1.65; ½ bu., \$2.85; bu. (60 lbs.), \$4.90; 2½ bu., \$12.15; 5 bu., \$24.15. Bags free.

SPRING SPELTZ OR EMMER

Grows any place on earth where grain can be raised and it grows where wheat, oats and barley would be a failure. It is relished by all classes of stock; it is splendid for hay and fattens in the green state.

Sow on ground prepared as you would for barley, wheat or oats, either broadcast or drill, at the rate of 2½ bu. per acre. Frost will not damage early planting. Cut the grain when it is a little past the milk stage. 4697—Radium Brand: Lb., 30c; 5 lbs., 94c, postpaid to 4th zone. Not prepaid: Peck, 98c; ½ bu., \$1.75; bu. SPRING WHEAT

Sow 1½ bu. per acre; 60 pounds in one bushel.

HENRY WHEAT—The important advantages of this spring wheat are disease resistance and high yield! It is resistant to leaf rust and moderately resistant to stem rust and stinking smut. In tests at the Wisconsin Experiment Station and with certified growers, it has considerably outyielded the older varieties, which it is rapidly replacing.

Henry Wheat matures about two days later than Sturgeon and about five days later than Vicland Oats. It has large, wide heads, with bearded chaff which is white or may be tinged with red at maturity. The kernels are larger than most spring wheats, and have fair to good milling and baking qualities.

SALZER'S CALIFORNIA GIANT DOUBLE ZINNIAS

This beautiful Zinnia has smaller centers and more loosely placed petals than the old type of Large Flowering Zinnias and the size of the flower has been notably increased. The petals are decidedly imbricated and the flower from bud to bloom assumes a succession of graceful forms. 3 to 4 feet.

The flowers are truly giant in size, frequently measuring $6\frac{1}{2}$ to 7 inches in diameter, and are borne on long and strong stems. When cut the graceful blooms last exceptionally long in water, and make a lovely bouquet. Everyone who has seen them has greatly admired this lovely new mammoth type of Zinnia, and its lovely range of colors. We offer it with the confidence that it will be a most welcome addition to the flower garden.
